What is Pint of Science??

Pint of Science is a grassroots **non-profit organisation** that has **grown astronomically** since two scientists decided to share their research **back in 2013**.

Each year we look forward to sharing the latest scientific discoveries with you and giving you an opportunity to interact and ask questions.

Effectively communicating scientific research has never been more important!

Hello my name is Barney, **CLICK** on me to learn my story!

Pint of Science GR

Pint of Science came to **Greece** in **2018** and has had a strong presence ever since.

This year Pint of Science International celebrated it's **10th birthday** since it's inception in 2013 at Imperial College. In honor of this we are **hosting a night in English** on **Wednesday 31st of May** in Athens.

«Drinks and Science - You could call it a symbiotic relationship!«

Why should I attend?

In celebration of Pint of Science's 10th birthday since the first event created by Imperial Postgraduates in the UK talks will take place in English by **three esteemed Imperial College Alumni!!** By now, you have probably realised is that these talks **do not resemble University lectures** and may even agree that **Scientists can be funny...**

If that is not enough following each talk there will be an **interesting conversation** where you can ask literally **whatever pops into your head!**

And if you still need another reason to come we will also be hosting a **pub quiz with many prizes!**

All of this whilst sipping (or downing- we do not judge) your favorite drink!

English Night Athens 31/5 19:30
Omikron 2

Sofia Skevofylaka
CCO & Co-Founder of Hatzi Filax Group,
HR Consultant & Trainer, Innovation & Entrepreneurship
MSc'20 Imperial College, VP IC GR alumni
Unlocking the SuperPowers of Employees

Alexandros Tzitzeras
Area Lead Cloud Solution Architect, Data & AI, Microsoft
GPT on the rocks with a zest of AGI

Vassilis Nikolopoulos
CTO and co-founder AVOKADO
Send energy as an email attachment...true?

PINT OF SCIENCE

when and where should I come

We have established that **Alcohol and Science mix well**. However, **drinking and driving do not**. We have therefore chosen a bar **2 minutes from Kerameikos tube Omikron 2**.

If you wish to drive there are plenty of **private Parking Garages in the area**. Just remember to have an **alcohol free Pint!** The event is **free** and requires no reservation. If you wish to make a reservation though feel free to contact the bar.

Follow Barney and you will find us....

PROGRAM 31 MAY, 02

Imperial College
London

Unlocking the SuperPowers of Employees

In today's fast-paced and ever-evolving world, harnessing the true potential of employees and each individual has become more crucial than ever. The key to success lies within the individuals who drive those organizations forward - the employees. Unlocking employee superpowers is the key to igniting innovation, boosting productivity, and achieving organizational success.

GPT on the rocks with a zest of AGI

Is that Artificial General Intelligence... ? It can write like Shakespeare, code like Elon, diagnose like House, and save you in the court like Harvey Specter. It can also handle multimodal inputs and outputs, such as images and texts, just like our brain! But is GPT-4 just a super-smart machine, or is it something more? Is it an early version of an artificial general intelligence (AGI) system, or is it just a fancy parrot? In this presentation, I'll show you some of the amazing and hilarious things that GPT-4 can do, as well as its limitations and challenges. Hopefully, this will trigger the inner philosopher in thinking around... the implications of AGI for humanity and society. Join us for a Pint of science and a fun and engaging conversation about GPT on the rocks with a zest of AGI!

Send energy as an email attachment...true?

Energy is around us, can take various forms. Electricity and Electric Power flows in cables, exists in moving electrons, exists in the wind, in the sun. The Current Wars in between DC and AC, had one winner. But can you imagine if we could control and send everywhere electrical energy, the same way we send emails to each other? Is this technologically feasible? Can we actually achieve energy connectivity in between houses? Was Nikola Tesla right after all?
